Jay Howard

Lead Software Engineer

me@jayhoward.dev (417) 825-7069 github.com/mistahoward jayhoward.dev

Relevant Experience

Lead Front End Engineer @ Compyl

June 2026 - Present // Joplin, Missouri (Remote)

- Developed an internal support portal on the Azure DevOps API that detects duplicate tickets and standardizes issue reporting between engineering and customer experience.
- Led a 5-person engineering team, keeping delivery continuous and the team aligned.
- Standardized peer review processes and SDLC workflows, establishing rigorous code quality standards that protected platform stability.
- Cultivated a high-trust culture through weekly 1:1s and personalized mentorship, unblocking developers and driving morale.

Software Engineer II - Front End SME @ Compyl

March 2025 - June 2026 // Joplin, Missouri (Remote)

- Led the end-to-end redesign of the core policies module, migrating from legacy DevExpress to CKEditor 5 to enable real-time collaboration and document revision history.
- Built a legally compliant internal e-signature and document acknowledgment system with secure hashing and browser agent recording, replacing costly third-party vendors.
- Redesigned the Controls interface across the full stack, using lazy loading and component optimization to improve page performance by over 90%.
- Closed 100+ bugs and 71 PBIs in a year while serving as Front End SME, streamlining engineer onboarding and enforcing code quality.

Full Stack Software Engineer @ Compyl

March 2024 - March 2025 // Joplin, Missouri (Remote)

- Led a full UI overhaul of the platform in C# and Blazor, integrating Sass and introducing dark and light modes.
- Introduced Fluxor to standardize data and state management, improving performance across the platform.
- Integrated SignalR to push real-time updates straight into the app's state store.

Interface Developer @ PowerShades

July 2022 - March 2024 // Joplin, Missouri (Hybrid)

- Developed AI tools integrating OpenAI's API, with Python (FastAPI) and Redis backends and React/TypeScript interfaces.
- Led the enhancement of internal sales tools supporting over 1,800 dealers, improving efficiency and user experience.

Professional Summary

Lead front-end engineer with 4+ years building C#/Blazor and React/TypeScript applications, most recently leading a five-person team. Specializes in complex state management (Redux Toolkit, Fluxor), UI performance, and the review and SDLC standards that keep a codebase stable. Has built LLM tools on OpenAI's API, worked agent-first in Cursor, and wrote a research review on how autonomous coding agents affect code quality and engineer agency. Brings a customer service background to stakeholder relationships and mentoring.

Skills

Programming Languages

C#, JavaScript & TypeScript, HTML & CSS/Sass, SQL, Python, PHP, C++

Libraries & Frameworks

Blazor, .NET, ASP.NET, React, Redux, Redux Toolkit, Fluxor, Node.js, Laravel, jQuery

Tools & Platforms

Git, Azure DevOps (Agile/Scrum), SignalR, Webpack, Playwright, Jest, ESLint, Bootstrap, Docker, Redis, LangChain, OpenAI API, Cursor

IT & Systems

Microsoft 365, Exchange, Entra ID, Intune, Autopilot, device deployment, Windows, macOS, Linux (Debian)

Education

Western Governors University

2025

Bachelor of Science, Software Development

Certifications

ITIL v4
CompTIA A+
CompTIA Project+
